

Nunc 96-well plates for screening

Polystyrene 96-well plates especially for screening applications and robotic systems. All these plates can be supplied with a labelled barcode.

Four surface qualities:

- **MAXISORP** : high affinity surface for hydrophilic molecules such as antibodies;
- **POLYSORP** : medium adsorption surface, with an affinity for molecules with a more hydrophobic character such as non-protein antigens;
- Non-treated : suitable for storage, DNA and antibiotic screening.

- Flat bottom
- High optical quality

Nunc Omnitray Plate

- Plate without wells in microplate format
- Can be used with robotic systems such as Beckman, Tecan, Zymark..
- Supplied with lid, stackable, sterile
- In transparent polystyrene
- Freezable at -20 °C
- Working volume : 35 ml, maximum volume : 90 ml
- Dimensions 128 x 86 mm
- Applications: liquid container, support for membranes in hybridization, usable with robotic systems

Cat. No.	Description	Pack unit.	Units/ carton	€ Excl. VAT/carton
056116	Sterile Omnitray plate	10	60	NC -
056117	Sterile Omnitray plate	10	90	NC -

STORAGE SCREENING

Nunc 384-well Microplates

- Polystyrene, sterile, treated for cell culture
- Non-treated or treated MAXISORP with high adsorption capacity
