

Abgene® 96-well® 96-well PCR Plate

- **SBS format**
- **Ultra-thin wall: promotes fast, optimal and homogeneous heat transfer (increased reproducibility)**
- **Extremely smooth, medical grade virgin polypropylene with no risk of DNA adsorption on the walls**
- **Available in white for quantitative PCR**
- **Each certified batch is free of DNase, RNase and human DNA (certificate included in each box)**
- **Quality control certificate provided**
- **Optical and electrical testing to ensure absence of micropores**
- **Flange around each well to eliminate the risk of cross-contamination and allow for different sealing methods**

Different models to meet your individual needs or applications:

- aBgene® standard plate (volume 0.3 ml) ;
- low Profile skirted plate (volume 0.2 ml) ;
- skirted plate for robotics (reinforced plate) ;
- Divisible or rigid semi-skirted plate (volume 0.3 ml) ;
- rigid plate for robotic applications;
- ultra rigid SuperPlate to avoid post-PCR distortion, ideal for robotic applications;
- random barcode version available on request for skirted and half-skirted plates (natural and white).
