Four surface choices, one warranty certificate

- **MAXISORP** surface has a high affinity for proteins: 600 to 650 ng of IgG per cm²
- **POLYSORP** surface plates average adsorption capacity : 200 to 250 ng of IgG per cm². For Elisa or serology applications
- **MULTISORP** surface, highly hydrophilic, ideal for high polarity molecule immobilisations.
- **MEDISORP** surface with a chemically intermediate surface between POLYSORP and MAXISORP (500 to 600 ng IgG per cm²)

- **Homogeneity of the batch**
- **The difference cannot be more than 10% of the average**
